<u>Challenge:</u>

Containerized CRUD API that persists to a Mongo instance.

<u>General Requirements:</u>
Input can be in JSON and XML
80% test coverage
Language: Java 11+
Datastore: MongoDB

<u>User Story:</u>
As a Vehicles Fleet manager I want to record my vehicles information into the fleet management system. Please provide a microservice with a CRUD API
Add new vehicles
Update existing vehicles
Delete vehicles
Fetch one or more vehicles.

I want to store the following details of the vehicle:
Name
VIN
License Plate number
Properties (any further information such as color, number of doors, number of wheels etc)
Note: The Properties of a vehicle does not have any fixed schema and your end-point should be able to handle both json and xml as properties.

<u>Deliverables:</u>
Public github / gitlab / other git link with the project
Instructions to run
